

The 6-DE-104+ board adds height to a PC/104-Plus stack. This is particularly useful when used with a Little Board to allow additional clearance in areas outside of the traditional PC/104 footprint. The use of this board adds 0.662" to the height of the stack. This board has a ground plane.

The board is available with Press-Fit pass-through connectors installed, or as a bare board.
