

The 6B-DE-104+ provides a unique way to connect two PC/104Plus (or PCI-104) stacks. This assembly provides a very low distance extender that joins the PC/104Plus connectors on the two stack by turning one of the stacks so that it's boards have the components facing down, while the other board has them facing up. When in this configuration and the two 120 pin connectors are close to each other, the 6B-DE-104+ joins the two to each other.

Options:

- *6B-DE-104+MF (Male on one side, Female on the other side)
- 6B-DE-104+TT (Pass-through connectors used at both locations)
- 6B-DE-104+MT (Male on one side, Pass-through on the other side)
- 6B-DE-104+FT (Female on one side, Pass-through on the other side)
